Innovation and Science

A proven gigabit network

GigCity is an initiative of the South Australian Government, established in 2017, to provide a fast, reliable, and affordable internet connection to the state's innovation precincts and business hubs.

Tenants of these precincts – including startups, businesses, universities, and other education providers – enjoy benefits like:

- The ability to transfer, download or upload data at gigabit speeds,
- Seamless video streaming, film and game production, and virtual reality experiences,
- Access to cloud-based storage and SA data centres,
- Support to keep your business cyber safe.

In collaboration with delivery partners SABRENet, Escapenet, and MIMP Connecting Solutions, GigCity is currently available at 25+ sites across South Australia – including at designated innovation and business precincts across Adelaide, and parts of Whyalla and Mount Gambier.

A full list of locations can be found on the GigCity website.

GigCity plans are flexible with no set-up costs and no lock-in contracts.

In the modern business environment, access to fast and reliable internet and cloud connection is vital. However, high-speed services are not available or affordable to all. GigCity is removing this barrier to business success.

GigCity provides a speedy and low-cost fibre optic network to help South Australian businesses develop leading edge ideas, create new opportunities and access global markets.

From as little as \$49.90 per month, eligible startups and established businesses can access speeds of one gigabit per second.

Eligible GigCity customers can also access cyber security support – including free workshops and the opportunity to sign up to EscapeNet's CyberOnRamp service.

Boost your business's productivity with seamless internet connection.

(additional data available at \$55 per 500GB per month)

10Gbps Cloud Connect Unlimited

\$250

10Gbps access to local businesses and data centres on the GigCity Adelaide network

Unlimited data per month

Testimonial: Apxium

South Australian startup Apxium works to automate the back-office accounts receivable processes for professional services firms around the world. Based in Adelaide innovation precinct Lot Fourteen, Apxium Founder and Managing Director Jeremy Coombe says GigCity has delivered the speed of internet required to fuel his business success.

"It's very much part of our DNA to seek out the most scalable technologies and enable efficiencies within our own business," Mr Coombe said. "This includes fast, reliable internet on a 24/7/365 basis.

"GigCity's access and reliability was imperative during our overseas expansion to the US, Canada and UK, which happened to occur right in the middle of the COVID-19 pandemic. Consequently, all our travel plans were put on hold, meaning a lot of video conferences and remote product demos."

Apxium's technology is built in-house, so GigCity connection is just as important for their team members as it is for their clients.

"It makes a massive difference in terms of workplace engagement when you're able to provide your team with world-class facilities to make their jobs easier."

Even with flexible working arrangements in place, Mr Coombe finds most employees prefer to travel into the office due to the speed and reliability of the internet service. This has been a major benefit, fostering a highly engaged team environment of culture and collaboration.
